(54) Title: A TIME-DELAY SOFT SWITCH

(57) Abstract: There is provided a time-delay soft switch that has one or more first layers (10) of material with first elastomeric properties and one or more second layers of material with second elastomeric properties differing from those of the one or more first layers (10). One or more first layers (10) and/or one or more second layers (20) are each provided with at least one electrically conductive portion surface (12, 22). The time-delay switch provides, via the relative elastomeric properties of the layers, a time delay for opening and/or closing of an electric circuit that is compatible with the soft, flexible nature of a fabric.
